

24-way fiber optic electronic distribution frame

Summary of Content

A 24-way fiber optic electronic distribution frame (ODF) is a compact, rack- or wall-mounted unit designed for fiber splicing, distribution, and management of up to 24 fiber connections.

Overview

A 24-way ODF serves as a central point for fiber cable termination, splicing, and distribution, providing protection and organization for fiber optic connections. It integrates fiber splice trays, adapters, and connectors to facilitate secure and efficient network management while preventing damage to delicate fibers.

Key Features

- **Capacity:** Supports 24 fiber connections, with some models expandable to 48 cores or more.
- **Construction:** Typically made of cold-rolled steel with electrostatic powder coating for durability and corrosion resistance.
- **Mounting Options:** Available in rack-mount (19-inch standard) or wall-mount configurations.
- **Adapter Compatibility:** Supports multiple adapter types including FC, ST, SC, and LC, allowing flexible network integration.
- **Fiber Management:** Includes trays and guides to maintain a minimum bend radius of $\geq 30\text{mm}$, preventing signal loss and fiber damage.
