

48-port network patch panel connected to switch

Overview

This patch panel offers 48 RJ45 ports with color-coded 110 punch-down slots that are terminated using a proper punch-down tool. Both the front and rear connectors are clearly numbered and labeled (for custom naming) to help you identify individual cable runs. The ICC 48-Port CAT5e Patch Panel offers high-performance connectivity for Gigabit Ethernet networks. Gold-plated contacts provide error-free. Panduit offers an extensive selection of modular patch panels, with various styles and port densities and an assortment of labeling options making them ideal for any installation. Modular patch panels accept all Mini-Com® Modules. Patch panels are one of the best ways to manage an expansive local area network (LAN) by providing quick and easy access to the ports and connections that connect them altogether. You can also get statistics from Device Manager, from the CLI, or from an SNMP workstation. POST failures are usually fatal. As a result, Panduit offers one-to-one switch patching to reduce network risk by improving cable organization and clearly mapping each switch port to the corresponding patch panel port.
