

All-optical-port 10 Gigabit fiber optic switch

Summary of Content

10 Gigabit fiber optic switches with all-optical ports provide high-speed, low-latency connectivity for enterprise and data center networks, supporting SFP+ modules and non-blocking line-speed forwarding.

Overview

All-optical-port 10Gb switches are designed to handle high-bandwidth traffic over fiber networks, offering 10 Gbps per port with minimal latency. These switches typically support SFP+ modules, allowing flexible deployment with multimode or singlemode fiber, and are compatible with IEEE 802.3ae standards for 10G Ethernet . They are available in managed and unmanaged formats, with features like plug-and-play installation, fanless operation, and surge protection for industrial environments .

Key Features

- **Port Configuration:** Common models include 8-port or 10-port switches with all SFP+ ports, supporting auto-negotiation between 1G and 10G speeds .
- **Switching Capacity:** High-performance switches offer 160 Gbps backplane bandwidth with non-blocking line-speed forwarding, ensuring full throughput on all ports simultaneously .
- **Flow Control:** Full-duplex IEEE 802.3x flow control and backpressure for half-duplex mode help prevent packet loss and congestion .
- **Plug-and-Play:** Many unmanaged models require no configuration, automatically detecting link speed and MDI/MDIX crossover .
