

# Belarusian Fiber Optic Endface Electric Cleaning Pen Upgrade Version

## Summary of Content

The upgraded electric fiber optic endface cleaning pen provides fast, efficient, and precise cleaning for multiple connector types, with replaceable rods and high rotation speed for stubborn contaminants.

### Key Features and Functionality

The upgraded electric cleaning pen is designed to remove anhydrous stains and debris from fiber optic endfaces efficiently, achieving results similar to endface polishing. Its high rotation speed allows it to clean stubborn contaminants that accumulate over time, making it suitable for both routine maintenance and long-neglected connectors. The pen typically includes replaceable cleaning rods with long service lives, which can be quickly swapped to maintain continuous operation.

### Compatibility

This type of cleaning pen supports a wide range of fiber optic connectors:

- 1.0mm interfaces: pins and jacks of certain products
- 1.25mm interfaces: LC, MU (UPC/APC)
- 2.5mm interfaces: FC, SC, ST (UPC/APC)

The service life of cleaning rods varies by size, with 1.0mm rods lasting up to 30 cleanings, 1.25mm rods up to 50 cleanings, and 2.5mm rods up to 100 cleanings. Some pens allow custom configuration to meet specific on-site requirements.

### Advantages of the Upgrade Version
