

Brunei fiber optic cable

Summary of Content

Brunei has a well-developed fiber optic network covering over 92% of populated areas, supported by local providers and international submarine cable connections.

National Fiber Infrastructure

Fiber optic technology in Brunei has been deployed for over 20 years, with broadband access starting around 2010. The Unified National Networks (UNN) manages a national backhaul network of more than 6,000 km of fiber, providing high-speed, low-latency connectivity across the country. As of early 2024, over 92% of Brunei's populated areas are fiberized, with ongoing projects to complete remaining regions by mid-2024. This rollout is part of a copper-to-fiber migration program aimed at discontinuing copper-based connections and enhancing broadband performance for fixed service customers .

International Connectivity

Brunei serves as a bandwidth transit hub for Borneo, connecting Sabah, Sarawak, and Kalimantan via terrestrial fiber to cable landing stations. The country is linked to nine international destinations, including Singapore, Hong Kong, Malaysia, Thailand, Vietnam, the Philippines, Japan, China, and the USA. Brunei currently has four active submarine cable systems with a potential bandwidth capacity of 10 Tbps, landed at the Tungku and Telisai cable stations. This infrastructure supports both domestic and international data traffic, positioning Brunei as a strategic connectivity hub in the region .

Local Fiber Optic Service Providers

Several companies specialize in fiber optic infrastructure in Brunei:
