

CSA Certified Cable Trays

Summary of Content

CSA Certified Cable Trays are metal or wire mesh cable support systems evaluated and approved by the CSA Group to meet Canadian and North American electrical safety standards.

Overview of CSA Certification

CSA (Canadian Standards Association) certification ensures that cable trays have been tested for safety, performance, and compliance with applicable electrical codes, including CSA C22.1 (CE Code) and NFPA standards for the USA and Canada . Products bearing the CSA mark are listed in the CSA Group Product Listing, which is updated daily to confirm certification status .

Types and Materials

CSA-certified cable trays are available in various materials and configurations to suit industrial, commercial, and hazardous environments:

- Steel Cable Trays: Hot-dipped galvanized, pre-galvanized, or stainless steel (304 or 316) for corrosion resistance .
- Aluminum Cable Trays: Lightweight and economical, often anodized for durability .
- Wire Mesh/Basket Trays: Flexible routing for control and instrumentation cables . These trays are designed for power, control, and signal circuits and can be used in cable trays, raceways, direct burial, or hazardous locations (Class I/II/III, Division 2) depending on the cable type .

Standards and Compliance
