

Cable tray anti-sway installation price

Summary of Content

Cable tray anti-sway installation typically ranges from \$10 to \$50 per meter, depending on material, tray type, and support complexity.

Cost Factors

Material Type: Steel trays are the most common and cost-effective, ranging from \$5 to \$25 per meter, while aluminum trays cost \$6 to \$30 per meter due to corrosion resistance, and FRP trays range from \$10 to \$50 per meter for aggressive environments. Stainless steel is the most durable but also the most expensive option. **Tray Design:** Ladder, ventilated, solid-bottom, and channel trays influence cost. Ladder trays are ideal for heavy-duty cables and high-current applications, while solid-bottom trays provide maximum protection for sensitive cables. The design affects both material and labor costs. **Anti-Sway Supports:** Anti-sway brackets, clamps, and additional supports are required to stabilize trays, especially in long spans or high-vibration areas. These accessories can add \$5–\$15 per meter depending on spacing and complexity. **Labor and Installation Complexity:** Installation costs vary with tray length, height, and accessibility. Modular or tool-free systems reduce labor costs, while complex industrial setups may increase installation expenses.

Estimated Price Range

- Basic steel ladder tray with standard supports: \$10–\$20 per meter
- Aluminum tray with anti-sway brackets: \$15–\$35 per meter
