

Cable tray bracket styles

Summary of Content

Cable tray brackets come in several types, including wall-mounted, ceiling-hung, floor-mounted, and cantilever brackets, each designed to support cable trays in different installation environments.

Common Types of Cable Tray Brackets

1. **Wall-Mounted Brackets** These brackets attach directly to walls and are ideal for vertical or horizontal cable routing along building surfaces. They are commonly used in commercial and industrial settings where floor space is limited and provide strong support for medium to heavy cable loads . 2. **Ceiling-Hung Brackets** Suspended from ceilings, these brackets support cable trays in overhead installations. They are suitable for large open spaces, such as warehouses or data centers, allowing cables to be routed above equipment and walkways while maintaining accessibility . 3. **Floor-Mounted Brackets** These brackets are installed on the floor and are often used in areas where wall or ceiling mounting is not feasible. They provide stable support for cable trays carrying heavy power or control cables and are commonly used in industrial plants . 4. **Cantilever Brackets** Cantilever brackets extend horizontally from a wall or column to support cable trays without additional vertical supports. They are useful for installations where space constraints prevent direct floor or ceiling mounting and are often used for long cable runs .
