

Cable tray laying in Middle Eastern aluminum plant

Summary of Content

Cable tray installation in Middle Eastern aluminum plants requires durable, corrosion-resistant trays, proper layout planning, and specialized cable-laying equipment to ensure safety and efficiency.

Cable Tray Selection

For aluminum plants, hot-dip galvanized or powder-coated steel cable trays are recommended due to their resistance to corrosion and high temperatures common in industrial environments. MASEICO in Jordan and Emerald Steel Industries in UAE provide industrial-grade cable trays, ladders, and supporting materials that comply with international standards, suitable for petrochemical, power, and aluminum production facilities. Standard lengths of 3 meters are available, with options for light, medium, heavy, and extra-heavy duty trays.

Installation Considerations

- **Layout Planning:** Map the cable routes to avoid interference with machinery, ventilation, and maintenance access. Ensure proper spacing and support intervals according to tray type and load.
- **Supports and Accessories:** Use strut supports, brackets, and hangers to secure trays. Accessories like bends, tees, and reducers help navigate complex plant layouts.
