

# Cable tray ramp dimensions and prices

## Summary of Content

Cable tray ramps are available in standard widths from 50mm to 600mm, heights from 50mm to 120mm, and lengths typically 2.5m to 3m, with prices ranging from \$50 to \$300 per section depending on material and load class.

### Standard Dimensions

Cable tray ramps, like straight trays, follow standardized dimensions to ensure proper cable support and compliance with NEC, NEMA, and IEC standards. Key dimensions include:

- Width: Nominal inside widths typically range from 50mm to 600mm, with outside dimensions slightly larger due to side rail thickness ( ).
- Height/Depth: Side rail heights usually range from 50mm to 120mm, controlling vertical stacking capacity and heat dissipation ( ).
- Length: Standard tray sections are commonly 2.5m or 3m long, allowing modular installation and easy connection to straight runs or other fittings ( ).
- Material Thickness: Mild steel trays often have thicknesses from 1.2mm to 1.5mm, with options for epoxy powder coating, hot-dip galvanization, or bare steel ( ). Ramps are designed to provide a gradual incline for cable transitions between different elevations, typically at angles of 15° to 30°, depending on the installation requirements ( ).

### Material and Load Considerations

- Steel (Mild or Galvanized): Most common, suitable for heavy-duty industrial applications.
