

Can a JXF distribution box be installed

Summary of Content

Yes, a JXF distribution box can be installed, either indoors or outdoors, using wall-mounted or embedded methods depending on the type and application.

Types and Installation Methods

JXF distribution boxes are available in indoor and outdoor types. The outdoor type is made of stainless steel, fully waterproof and corrosion-resistant, suitable for urban, rural, industrial, and mining sites. It supports AC systems up to 500V and is designed for lighting circuits, overload protection, and metering purposes. The indoor type is made of cold-rolled steel, suitable for industrial workshops and general enterprises, supporting AC three-phase systems up to 380V . Installation methods include:

- Wall-mounted installation: The box is fixed directly to a wall using mounting holes. This is common for both indoor and outdoor types .
- Embedded installation: The box is recessed into a wall or panel, providing a flush finish and saving space .

Structural Features Supporting Installation

- Cable entry and exit: Both types have pre-designed holes on the top and bottom for easy wiring, with insulated gaskets for safety .
- Internal mounting: Electrical components such as breakers, contactors, and terminal blocks can be installed on internal racks or plates .
- Protection levels: JXF boxes can achieve high protection ratings (e.g., IP54), preventing dust and water ingress, which is crucial for outdoor or harsh environments
