

Concealed Inspection Items for Distribution Boxes

Summary of Content

Concealed inspection items for distribution boxes include protective conductor continuity, RCD functionality, internal weld quality, surge protection installation, and material integrity verification.

Electrical Safety Checks

When inspecting distribution boxes, start with visual inspection and then move to concealed electrical tests. Key items include:

- **Protective Conductor Continuity:** Measure continuity from the main protective conductor to all socket contacts to ensure proper grounding and fault protection (NEN 3140) .
- **Residual Current Device (RCD) Testing:** Verify that the RCD is type A with a maximum tripping current of 30 mA and press the test button to confirm operation .
- **Surge Protection Devices (SPD):** Check that SPDs are correctly installed and connected to prevent damage from voltage spikes .
- **Internal Wiring and Bonding:** Inspect for missing circuit protective conductors (CPCs), proper main protective bonding, and correct wiring colors .

Material and Structural Integrity

Concealed issues often relate to the enclosure and assembly quality:

- **Weld Inspection:** Use ultrasonic or other non-destructive testing to detect poor weld penetration that could allow moisture ingress .
