

Connect the optical port module to the motherboard

Summary of Content

Internal optical drives connect to the motherboard via a SATA or IDE cable and require a power connection from the PSU.

Step 1: Prepare Your Computer

- Power down your computer completely and unplug it from the wall to prevent electrical hazards.
- Ground yourself using an anti-static wrist strap or by touching a metal part of the case to avoid static damage to components .

Step 2: Identify the Drive Type

- SATA drives are standard for modern optical drives and motherboards.
- IDE (PATA) drives are older and may require jumper settings for master/slave configuration .

Step 3: Install the Drive in the Case

- Locate an available 5.25-inch drive bay in your case.
- Slide the optical drive into the bay and secure it using screws or rails, depending on your case design .

Step 4: Connect the Data Cable
