

Distribution Box Inspection Procedure

Summary of Content

Distribution box inspection involves systematic physical checks, internal component verification, electrical testing, cleaning, and documentation to ensure safety, reliability, and compliance.

1. External and Physical Inspection

Begin with a thorough visual inspection of the distribution box. Check for:

- Signs of corrosion, rust, or physical damage to the enclosure
- Legibility of labels and warning signs
- Proper mounting and secure installation
- Door locks, hinges, and ventilation openings for proper operation
- Any overheating or arcing marks on the exterior

2. Internal Inspection

Open the distribution box and inspect internal components:

- Remove dust, debris, or oil accumulation that may affect heat dissipation
- Check circuit breakers, terminals, and wiring for tightness and signs of damage or burning
- Verify surge protection devices and other protective components
- Inspect busbars and mechanical connections for corrosion or looseness
