

Distributor Micro-module Waterproof Type for Data Centers

Summary of Content

Waterproof micro-module data centers are compact, modular solutions with integrated power, cooling, and monitoring systems, designed for harsh environments with IP/NEMA-rated protection.

Overview

Waterproof micro-module data centers are self-contained, modular units that integrate IT racks, power distribution, cooling, and monitoring systems in a single enclosure. These solutions are ideal for edge computing, industrial environments, and small- to medium-sized data centers, providing rapid deployment, scalability, and protection against dust, moisture, and temperature extremes .

Key Features

- **Protection and Durability:** Many micro-modules are sealed with NEMA or IP-rated enclosures, ensuring protection against water ingress and harsh indoor conditions .
- **Integrated Power Distribution:** Includes precision power distribution units (PDUs), UPS systems, and smart busways with high efficiency ($\geq 96\%$) and configurable IT loads up to 310 kW per module .
- **Cooling Systems:** Supports air-cooled or water-cooled in-row air conditioners, closed hot/cold aisle containment, and advanced refrigeration to maintain optimal temperatures for high-density racks .
