

# Dominican Republic Fire Protection Distribution Box Switch

## Summary of Content

Fire protection distribution box switches in the Dominican Republic are available through specialized suppliers like Prime Fire and local electrical distributors, with options for secure, NFPA-compliant systems and controlled access.

### Key Suppliers and Services

Prime Fire is a leading fire protection company operating in the Dominican Republic, offering design, installation, and inspection of fire protection systems, including control panels and distribution switches. They are authorized distributors of Notifier by Honeywell, providing advanced fire alarm and control panels suitable for commercial and industrial applications. Their services include installation, maintenance, and regulatory compliance with local authorities and NFPA standards. Vanma Access-Controlled Distribution Boxes are used in Dominican power stations to secure electrical distribution equipment. These systems allow authorized personnel to access switches while maintaining a log of who accessed the box, when, and where. This ensures both operational safety and security in remote or high-risk areas.

### Local Electrical Distributors

Several local distributors supply electrical materials, including distribution boxes and switches suitable for fire protection systems:

- 7J Electricos - Electrical products for construction and industrial use.
- APS Power Solutions - Focused on generation, transmission, and distribution equipment.
