

EU Standard Secondary Distribution Box

Summary of Content

An EU standard secondary distribution box is a modular electrical enclosure designed to safely distribute power to subsidiary circuits while complying with IEC 61439 and local European regulations.

Overview

A secondary distribution box, also known as a consumer unit or distribution board, is used to divide an incoming power supply into multiple circuits, providing overload and fault protection for each circuit . These boxes are essential in residential, commercial, and industrial installations to ensure safe and organized power distribution.

Compliance and Standards

European standard distribution boxes are engineered to meet strict safety and performance requirements:

- IEC 61439: Governs low-voltage switchgear and control gear assemblies, including distribution boards, ensuring safety, reliability, and standardized testing .
- National standards: For example, BS 7671 in the UK aligns with IEC 61439 and specifies installation practices, accessibility, and mounting heights .
- IP Ratings: Commonly IP44 for indoor use and IP65 for outdoor or harsh environments, providing protection against dust and water ingress .

Key Features

- Modularity: DIN-rail compatible enclosures allow easy addition or replacement of circuit breakers, supporting future expansion .
