

Fiber Optic Transceiver Single-Mode Single-Port

Overview

A single mode SFP transceiver is an optical module that uses laser-based transmission over single mode fiber to deliver long-distance, high-speed data communication, typically at 1310nm or 1550nm wavelengths. SFP (Small Form-factor Pluggable) transceivers are essential components in modern fiber optic networks, enabling network devices such as switches, routers, and servers to transmit and receive data over optical fiber. Create a link from 1 m to 23 km in length using SEL-2829 Fiber-Optic Transceivers. Transfer data at rates up to 40 kbps. Using the DDM functionality, which is fully integrated into WeOS, it is possible to monitor parameters such as. Optical and copper models can be used on a wide variety of Cisco products and intermixed in combinations of 1000BASE-T, 1000BASE-SX, 1000BASE-LX/LH, 1000BASE-EX, 1000BASE-ZX, or 1000BASE-BX10-D/U on a port-by-port basis.
