

Fiber optic PoE switch cascading

Overview

A cascading connection is a common switch connection method that allows multiple switches to be connected to expand the network size and increase the number of ports. Cascading connections form a link by connecting the ports of one switch to the ports of another switch, and. A POE switch gives power to devices that support the protocol, like cameras and access points. OmniConverter PoE Switches feature one or two fiber uplink ports and up to eight. POE Fiber Switch Cascading 10/100Mbps 4 POE Ethernet and 2 Optical Ports Technical Parameters System Overview The POE Fiber Switch Cascading uses the design of industrial redundant ring net, and you can find two fiber ports which make up the ring net in every transmission equipment. The ring network topology structure is composed through hand in hand cascading, which can achieve no phase delay transmission.
