

Fiber optic cable connector 200 meters wide

Summary of Content

200-meter fiber optic cables are available in both single-mode and multimode types, with connectors such as LC, SC, and V-Pin suitable for industrial, telecom, and data networking applications.

Cable Types and Connectors

Multimode Fiber (MMF): Typically used for medium-distance applications up to 200 meters, multimode cables like 62.5/125 μm or 200/230 μm cores support high-speed data transfer in enterprise networks, labs, and industrial environments. Common connectors include LC to LC duplex for standard networking and V-Pin connectors for industrial bus systems like PROFIBUS or INTERBUS, which are robust against electrical noise and EMI (Amazon, HolightOptic) . **Single-Mode Fiber (SMF):** Designed for long-distance and high-bandwidth applications, single-mode cables with G657A1 fibers are suitable for FTTH, telecom, and CCTV deployments. Connectors are usually LC or SC, optimized for low insertion loss and high return loss, ensuring reliable signal transmission over 200 meters (Alibaba, VideoExpert) .

Industrial vs Telecom Applications

- **Industrial Networks:** Use HCS multimode fibers with V-Pin connectors for medium-distance links (50–200 m) in electrically noisy environments, such as factories or wind turbines. These cables prioritize environmental tolerance over maximum bandwidth and often use visible red LED sources instead of lasers .
