

Fiber optic cable is fine router is showing a red light

Overview

To fix a red LOS light on your router/ONT, start by checking that the fiber patch cord is firmly clicked into the ONT's PON port and undamaged, then power cycle the device for 30 seconds. When it's green and steady, everything is fine. However, when it blinks red or stays solid red, it signifies a Loss of Signal, a problem preventing your router from communicating. That blinking red LOS light means your router has lost its connection to your internet provider's network. Before you panic or call tech support, there are several simple fixes you can try at home that often solve this problem in minutes. This article explains the common causes, step-by-step troubleshooting methods, and when to contact your broadband provider to restore your internet. A router showing a red light can mean different things, like a service outage, misconfiguration, or loose connection, all of which can lead to a broken internet connection. If the light stays red, check your ISP's app or helpline for an area outage before calling support.
