

Fiber optic coupler SC connector

Summary of Content

SC-type fiber optic couplers are square push-pull connectors widely used in single-mode and multimode networks for reliable, low-loss optical connections.

Overview

The SC (Subscriber Connector) coupler is a widely adopted fiber optic connector known for its square shape and push-pull mechanism, which allows easy insertion and removal while maintaining stable optical alignment . SC couplers are commonly used in FTTH (Fiber to the Home), data centers, and telecom networks, supporting both single-mode and multimode fibers .

Structure and Materials

- **Ferrule:** SC connectors typically use a 2.5 mm ferrule for single-fiber connections, ensuring precise alignment of the fiber cores .
- **Sleeves:** Single-mode SC couplers use Zirconia ceramic split sleeves for both PC (Physical Contact) and APC (Angled Physical Contact) connections, providing high performance under temperature extremes and rough handling . Multimode OM3 and OM4 couplers also use Zirconia sleeves, while OM1 and OM2 couplers use PhBr metal sleeves .
- **Housing:** The connector body is made of precision-molded polymer, offering long-term optical and mechanical stability .
- **Mounting:** Couplers can be fixed using a stainless steel quick-mount clamp, and flanged versions include holes for 2 mm screw fixing .
