

Fireproof Cable Tray Raw Materials for Saudi Arabia

Summary of Content

Fireproof cable trays in Saudi Arabia are primarily manufactured from hot-dip galvanized steel, stainless steel, and other corrosion-resistant metals, meeting ISO and UL standards for safety and durability.

Common Raw Materials

- **Hot-Dip Galvanized Steel (HDG):** Widely used for fireproof cable trays due to its corrosion resistance and high-temperature tolerance, making it suitable for harsh desert and industrial environments in Saudi Arabia (Adhwa Al-Rawafid Electric Industries, SFSP/Unitech) .
- **Stainless Steel:** Offers excellent fire resistance and durability, often used in critical installations such as hospitals, airports, and industrial plants where fire safety is paramount (Hitech Fence, SFSP/Unitech) .
- **Powder-Coated Steel:** Provides additional protection against UV exposure and corrosion, suitable for outdoor installations in extreme climates (Hitech Fence) .
- **Aluminum:** Lightweight and corrosion-resistant, sometimes used for specialized fireproof cable trays, though less common than steel in heavy-duty industrial applications.

Fireproofing and Standards

- **UL and ULC Certifications:** Some cable trays are tested for fire resistance, ensuring they can withstand high temperatures and maintain structural integrity during a fire (SFSP/Unitech) .
