

Fireproof baffle for household electrical distribution boxes

Overview

3M™ Fire Barrier Electrical Box Inserts are a flexible, one-piece fire-rated intumescent insert used to protect electrical boxes by adhering to the inside the box. When exposed to fire, the insert expands to fill up the box preventing the spread of fire and limiting temperature rise. Applicable directly inside the boxes, during a fire, the thermal-expanding sleeves expand until the wire and switch compartment is. Plasterboard baffle boxes are enclosures formed within partition walls or ceilings to maintain fire compartmentation, acoustic separation, or to dress around services such as ductwork, sprinklers, cable trays or pipework. However, they are susceptible to overloading, causing dangerous fires and harmful smoke spreading within. Available in aluminium or stainless steel, these enclosures are fully flame retardant and offer incredible protection for your equipment in the most hazardous of conditions. Available as Ex certified (Sira 08 ATEX 3212 or IECEx SIR 13. 0038X and fitted with an M6 earth stud).
