

Galvanized Cable Trays in New Zealand

Summary of Content

Galvanized cable trays in New Zealand provide durable, corrosion-resistant support for electrical and data cabling, suitable for commercial and industrial installations.

Types of Galvanized Cable Trays

In New Zealand, galvanized cable trays are available in pre-galvanized (Galvabond) and hot-dip galvanized (HDG) finishes, offering protection against corrosion for both indoor and outdoor applications . Common types include:

- Ladder trays: Open design with rungs for heavy cables, excellent ventilation, and easy access for maintenance .
- Wire mesh or basket trays: Lightweight, flexible, and suitable for data and light power cabling .
- Trough or solid-bottom trays: Provide maximum protection for sensitive or small instrumentation cables .
- Single rail trays: Used for lighter loads or aesthetic-sensitive installations .

Material and Finish Considerations

Galvanized steel trays are coated with zinc to prevent corrosion. Pre-galvanized trays are coated before fabrication, while hot-dip galvanized trays are coated after fabrication, offering thicker protection and better durability in harsh environments . Some suppliers also offer powder-coated or custom-painted finishes for architectural or specialized requirements .

Installation Guidelines
