

Guatemala SD-WAN device 40G

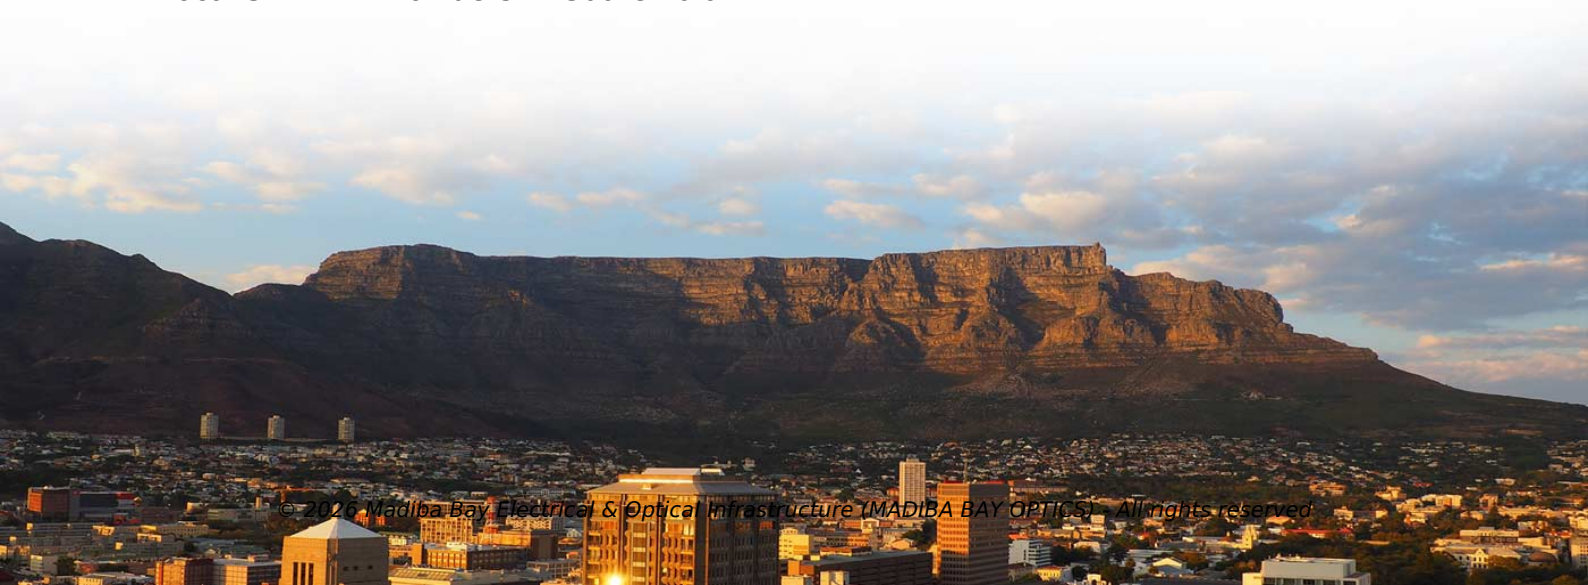

Summary of Content

For 40G SD-WAN deployments in Guatemala, Cisco high-density routers are the primary option, while Fortinet devices serve smaller branch offices with lower throughput.

High-Throughput SD-WAN Devices

Cisco SD-WAN Routers offer high-density 400G-capable models suitable for enterprise hubs and data centers, supporting segment routing, SLA-based services, and scalable routing for demanding applications . These devices are ideal for organizations requiring 40G or higher throughput, multi-cloud connectivity, and advanced network automation. Cisco's SD-WAN solutions also provide secure, programmable routing with cloud-managed orchestration, making them suitable for large-scale deployments in Guatemala. Fortinet FortiGate 40F Series is designed for branch offices and mid-sized businesses, offering secure SD-WAN in a compact, fanless form factor with built-in 3G/4G LTE failover . While the 40F series is not 40G-capable, it provides robust security, centralized management, and reliable connectivity for smaller sites, making it a complementary solution for multi-site SD-WAN networks.
