

Height of the Ale distribution box

Summary of Content

The height of typical MB-ABC series distribution boxes is 95 mm (approximately 3.74 inches).

For context, the MB-ABC series of plastic distribution boxes, which are commonly used in residential, commercial, and industrial applications, have standardized dimensions. The height for MB-ABC500, MB-ABC700, and MB-ABC900 models is consistently 95 mm, while their lengths range from 200 mm to 328 mm and widths from 172 mm to 174 mm, depending on the model. These boxes are made of flame-resistant ABS plastic and comply with relevant safety standards, making them suitable for housing electrical components safely. Additional considerations:

- E-Abel general distribution boxes offer flexible mounting options and adjustable side racks, which can slightly affect the effective height depending on installation.
 - Heights may vary for other series or custom configurations, so it is recommended to check the specific model datasheet if precise installation dimensions are required.
- In summary, for standard MB-ABC type distribution boxes, 95 mm is the typical height, but installation adjustments or alternative models may slightly alter this measurement.
