

How much does a level 3 distribution box with installation cost

Summary of Content

A Level 3 distribution box with installation typically costs between \$50,000 and \$350,000, depending on power rating, site complexity, and additional infrastructure requirements.

Equipment Cost

The Level 3 charging station itself generally ranges from \$50,000 to \$150,000 for a single unit, with higher-power models (e.g., 300 kW) and multi-connector setups costing more due to advanced features like liquid cooling, intelligent control systems, and support for multiple charging standards (CCS, CHAdeMO) (EVB.com) . Residential installations are less common, but a single-port Level 3 charger can cost around \$40,000, with total equipment and installation potentially exceeding \$80,000 (MotorBiscuit) .

Installation Cost

Installation costs vary widely based on site readiness, electrical upgrades, trenching, permitting, and labor. Typical installation expenses start at \$20,000 and can reach \$200,000 or more for complex commercial sites (EVB.com, LatestCost.com) . Factors affecting installation include:

- Electrical service upgrades: High-power chargers often require new transformers or panel upgrades.
- Trenching and cabling: Distance from the main power supply and site layout can increase labor and material costs.
