

How much does a network cable or fiber optic cable cost

Summary of Content

Fiber optic cables are generally more expensive than traditional copper network cables, both in material and installation costs, but offer higher performance and long-term value.

Material Costs

- Copper Coaxial Cables: Typically cost around \$0.35 per foot for standard coaxial cable used in homes and offices . Copper cables are widely available and have been deployed for decades, making them relatively inexpensive.
- Fiber Optic Cables: Material costs range from \$1 to \$6 per foot, depending on the type (single-mode vs multimode), strand count, and construction (indoor, armored, or plenum-rated), . Simple single-core fiber for home use can cost as little as \$0.13 per foot, while high-count backbone cables can reach \$6 per foot .

Installation Costs

- Copper Cables: Installation is generally straightforward, often using existing wiring in buildings, which keeps labor costs low. Home or small office setups may require minimal professional assistance .
- Fiber Optic Cables: Installation is more complex and expensive. It often requires specialized technicians, trenching, permits, and precise splicing using fusion splicers. Average installation for a home or small office can range from \$1,500 to \$7,000, with commercial building installations for multiple network drops costing \$15,000 to \$30,000 .
