

How much does galvanized cable tray cost per meter

Summary of Content

Galvanized cable trays typically cost between \$10 and \$30 per meter, depending on type, coating, and load capacity.

Price Range and Factors

The cost of galvanized cable trays varies based on material, type, and surface finish. Standard steel trays generally range from \$10 to \$30 per meter, while hot-dip galvanized (HDG) trays are more expensive due to their thicker zinc coating, providing superior corrosion resistance for outdoor or industrial environments. Pre-galvanized trays are cheaper but less durable in corrosive conditions. Ladder-type trays, which support heavier cables, tend to be at the higher end of the price range, whereas perforated or wire mesh trays are more affordable.

Standard Lengths and Fittings

Most cable trays are sold in standard lengths of 2.4 meters, and the cost of fittings (elbows, tees, reducers) is calculated per piece, adding to the overall project cost. Supports, brackets, and installation hardware can contribute 20–30% of the total cost, especially in complex layouts with multiple corners or vertical runs.

Installation and Regional Considerations

Labor, shipping, and local market conditions also influence the final price. Skilled labor, equipment depreciation, and energy consumption for cutting, welding, or finishing can increase costs. Bulk orders or long-term supply contracts may reduce per-meter pricing, while remote locations may incur higher shipping fees.
