

How much does indoor optical cable cost per kilometer gjfh

Summary of Content

Indoor optical fiber cables typically cost between \$50,000 and \$300,000 per kilometer, depending on type, fiber count, and specifications.

Cost Overview

The price of indoor optical fiber cable varies widely based on fiber type, strand count, jacket material, and manufacturer. For standard indoor cables like GJFH, which feature LSZH jackets and aramid yarn strength members, the cost per meter ranges from \$0.05 to \$0.30 for simplex or duplex configurations, translating to approximately \$50 to \$300 per kilometer for basic indoor runs. Higher strand counts, such as 12, 24, or 48 fibers, increase the cost proportionally, with premium indoor cables potentially reaching \$1 per meter or more, equivalent to \$1,000 per kilometer.

Factors Affecting Price

- **Fiber Type:** Single-mode fibers are generally cheaper per meter than multi-mode fibers for the cable itself, but multi-mode transceivers are less expensive.
- **Jacket Material:** Indoor cables often use PVC or LSZH jackets; LSZH is preferred for fire safety in buildings and slightly increases cost.
- **Strand Count:** More fibers in a single cable increase material costs. For example, a 2-core cable is much cheaper than a 24-core or 96-core cable.
- **Armoring:** Armored indoor cables are more expensive due to additional protective layers, though they are less common indoors.
