

How much does it cost to remove overhead optical cables

Summary of Content

The cost of removing overhead optical cables varies widely, typically ranging from a few hundred to several thousand dollars depending on cable type, location, and service provider requirements.

Factors Affecting Cost

- **Ownership and Permissions** Overhead optical cables are often owned by telecom providers like Openreach in the UK. Removal or relocation requires contacting the provider, completing a network relocation request, and obtaining approval. Costs may differ depending on whether the equipment is newly installed or has been in place for over 12 months .
- **Labor and Equipment** Removing overhead cables involves specialized labor and equipment, including pole access, safety gear, and possibly cranes or bucket trucks. Labor costs can vary based on the complexity of the installation, height of poles, and accessibility .
- **Cable Type and Termination** The type of fiber optic cable (single-mode vs. multi-mode) and the termination method (fusion splicing, mechanical splice, or epoxy and polish) can influence costs. Fusion splicing, for example, requires expensive equipment and skilled technicians, increasing overall removal or reconnection expenses .
