

How to buy a router for your home s fiber optic cable

Summary of Content

To buy a router for fiber optic internet, choose one that supports Gigabit speeds, has a WAN port for your ONT, and uses modern Wi-Fi standards like Wi-Fi 6 or Wi-Fi 7 for optimal performance.

Key Considerations

1. Compatibility with Fiber Internet Not all routers work with fiber optic connections. Fiber internet often requires an Optical Network Terminal (ONT), which converts the fiber signal into data your router can use. Ensure the router has a WAN port to connect to the ONT and supports Gigabit Ethernet speeds to handle the high bandwidth provided by fiber . 2. Wi-Fi Standards Modern routers with Wi-Fi 6 or Wi-Fi 7 provide faster speeds, better coverage, and support for multiple devices simultaneously. Wi-Fi 7 routers, for example, can handle ultra-fast fiber speeds and support over 100 devices, making them ideal for streaming, gaming, and smart home setups . 3. Coverage and Device Capacity Consider the size of your home and the number of devices. Mesh routers or routers with multiple bands (dual or tri-band) can provide better coverage and reduce dead zones. Some routers support LAN aggregation to combine ports for faster wired connections, which is useful for high-speed fiber plans . 4. Security and Features Look for routers with advanced security features, such as firewall protection, malware defense, and parental controls. Features like Wi-Fi Protected Setup (WPS) make connecting devices easier . 5. Budget and Use Case

- Basic home use: Routers like the UFiber UF-WiFi6 provide reliable Wi-Fi 6 performance for everyday browsing, streaming, and light video conferencing .
