

How to connect a fiber optic cable s round connector to a router

Summary of Content

Fiber optic cables cannot usually plug directly into a standard router; they must first connect to an Optical Network Terminal (ONT) or a compatible router port, then link to the router via Ethernet.

Step 1: Gather Necessary Equipment

- Fiber optic cable: Typically single-mode with SC/APC or SC/UPC connectors. Handle by the plastic housing to avoid damaging the fiber.
- Optical Network Terminal (ONT): Converts the optical signal into an electrical signal your router can use. Usually provided by your ISP.
- Router: Ensure it has a WAN port or an SFP/optical port compatible with fiber input.
- Ethernet cable: Cat6a or higher is recommended for optimal speed between the ONT and router .

Step 2: Connect the Fiber Cable to the ONT

- Locate the fiber wall outlet where your ISP's line enters your home.
- Remove protective caps from both the fiber cable and the ONT port.
- Align the connector using the key or tab and gently push it in until it clicks securely. Avoid bending the cable sharply .
- Power on the ONT and wait for the status lights to stabilize, indicating a successful connection to the fiber network.
