

How to connect a square pigtail connector to a round square pigtail connector

Summary of Content

You can connect a square pigtail connector to a round pigtail connector by matching wire gauges, stripping the wires, joining them via crimping or soldering, and insulating the connection for safety.

Step-by-Step Guide

1. Safety First Before starting, disconnect the power source to prevent electric shock. Use a non-contact voltage tester to confirm the circuit is de-energized . 2. Prepare the Wires

- Cut the wires from both connectors to expose a clean section.
- Strip about half to three-quarters of an inch of insulation from each wire end, unless using a nylon closed-end connector that pierces insulation automatically .
- Ensure the wire gauge matches between the square and round pigtail wires to maintain proper current handling . 3. Join the Wires
- Twist Method: Align the stripped ends of the wires and twist them together clockwise.
- Crimp Method: Insert the twisted wires into a crimp sleeve or connector and compress using a crimping tool. For nylon connectors, insert the wires and press the cap to pierce insulation and make contact .
