

How to connect fiber optic cables to a router and the price

Summary of Content

To connect a fiber optic cable to a router, you typically use an Optical Network Terminal (ONT) to convert the fiber signal to Ethernet, then link it to a compatible router; installation costs vary depending on provider and setup.

Step-by-Step Connection Process

- Gather Necessary Equipment
- Optical Network Terminal (ONT): Converts the fiber optic signal into electrical signals your router can use, usually provided by your ISP .
- Fiber-Ready Router: Ensure your router supports fiber input, often via an SFP or WAN port labeled "Fiber" or "ONT" .
- Fiber Optic Cable: Typically single-mode with SC/APC or SC/UPC connectors .
- Ethernet Cable: Cat6a or higher is recommended to maintain high-speed performance between the ONT and router .
- Install the ONT
- Locate the fiber wall outlet where the ISP's fiber line enters your home.
- Connect the fiber optic cable from the wall outlet to the ONT's optical port. Handle the cable carefully to avoid damage.
- Power on the ONT and wait for the status lights to stabilize (usually 2-5 minutes), .
