

How to connect optical modules and switches

Summary of Content

Proper connection of optical modules and switches requires correct module installation, fiber handling, and ensuring compatibility between devices.

Installing Optical Modules

- **Select the Correct Module:** Ensure the optical module (SFP, SFP+, or other transceiver) is certified for your switch model to guarantee transmission reliability and service stability .
- **Prepare the Port:** Remove dust plugs from the optical port and keep them for future use. Avoid touching the edge connector of the module .
- **Insert the Module:** Orient the module correctly and gently push it into the port until it clicks. If it does not fit, rotate 180 degrees and try again .
- **ESD Precautions:** Wear an ESD wrist strap or gloves to prevent electrostatic damage .

Connecting Optical Fibers

- **Fiber Selection:** Choose fibers that match the module type (single-mode or multi-mode) and the required transmission distance .
- **Labeling and Routing:** Attach temporary labels to both ends of each fiber and plan the cabling route. Use protection pipes and maintain a minimum bend radius of 40 mm to prevent damage .
