

How to disconnect the fiber optic cable from the communication equipment

Summary of Content

To safely disconnect a fiber optic cable, power down the device, identify the connector type, release the locking mechanism, and pull the connector straight out while protecting the exposed fiber end.

Step-by-Step Procedure

1. Power Down the Equipment Before handling any fiber optic cable, turn off the modem, ONT, or communication device to eliminate the risk of exposure to infrared laser light and prevent electrical hazards (). 2. Clear the Workspace Ensure the area around the equipment is clean and free of dust or clutter. Even microscopic particles can damage the fiber tip and degrade signal quality (). 3. Identify the Connector Type Common residential connectors include SC (Subscriber Connector) and LC (Lucent Connector). SC connectors are square with a push-pull mechanism, while LC connectors are smaller and use a clip or latch (). 4. Engage the Release Mechanism

- SC Connector: Depress the small plastic tab on the connector housing to release the lock.
