

How to install a home surveillance distribution box

Summary of Content

Installing a home surveillance distribution box involves mounting the box, organizing cables, connecting power and network lines, and integrating it with your DVR/NVR system.

Step 1: Choose the Location

Select a central, secure, and dry location for the distribution box, ideally near your DVR/NVR and power source. Avoid areas exposed to moisture, extreme heat, or direct sunlight. Ensure the location allows easy access for maintenance and cable routing.

Step 2: Mount the Distribution Box

Use a drill and screws to securely mount the box to a wall or cabinet. Make sure it is level and firmly attached to support the weight of cables and devices. Some boxes come with pre-drilled holes for easier installation.

Step 3: Plan and Route Cables

- Label each cable before connecting to avoid confusion.
- For wired cameras, run Ethernet or coaxial cables from each camera to the distribution box.
- For power cables, ensure they are routed safely and do not cross high-traffic areas.
- Use cable ties or conduits to keep cables organized and prevent tangling.
