

How to install fiber optic cable on a router network

Summary of Content

Fiber optic cables connect to a router via an Optical Network Terminal (ONT), which converts light signals into data your router can use.

Required Equipment

To install fiber optic internet, you will need:

- Optical Network Terminal (ONT): Provided by your ISP, it converts optical signals into electrical signals.
- Fiber optic cable: Usually a thin yellow cable with SC/APC or SC/UPC connectors.
- Router: Must support fiber input via WAN or SFP ports.
- Ethernet cable: To link the ONT to your router.
- Power supply: For both the ONT and router .

Step 1: Install the ONT

- Locate the fiber wall outlet where the ISP's fiber line enters your home.
- Connect the fiber optic cable from the wall outlet to the ONT's optical port. Handle the cable carefully, touching only the plastic housing to avoid damage. Remove protective caps before connecting. Align the connector properly and push until it clicks .
