

How to install light wires in a distribution box

Summary of Content

To install light wiring in a distribution box, connect the lighting circuits to the appropriate MCBs, ensuring proper phase, neutral, and earth connections, while following safety standards and using protective devices.

Preparation and Safety

Before starting, turn off the main power supply and verify with a tester that no electricity is present in the installation area . Wear insulating gloves, safety glasses, and non-slip shoes to prevent accidents . Prepare tools such as a screwdriver, wire stripper, multimeter, and insulation tester, and ensure all wires, terminal blocks, and circuit breakers are in good condition .

Mounting the Distribution Box

- Select a suitable location: Dry, ventilated, and easily accessible, away from flammable or corrosive materials .
- Fix the box securely: Mark and drill holes, then attach the box using expansion bolts. Ensure it is level and stable. For outdoor installations, use a waterproof box .

Wiring the Lighting Circuits

- Identify the main input: Connect the incoming phase (live) wire to the main MCB and the neutral wire to the neutral bus bar .
- Install protective devices: Use RCCBs for leakage protection and single-pole MCBs for individual lighting circuits .
