

How to place the optical cable on the cable reel

Overview

Connect the cable to be wound (AKA the deployment cable) on the reel to the connectors or pigtail in the drum exit port as required. Align the fibers/wires with the slots in the drum exit cover and then push the cover horizontally into the drum exit port until it snaps. The FCR-1000 series cable reels are designed to fit Princetel's standard FORJs and slip rings. Only roll reel in direction of arrow on flange. Do not use forklift to slide cable reel. Proof duct with a mandrel that is 80% full of duct. Calibrate capstan to cable puller. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth. Turn-backs and all sharp changes of direction. This procedure shows the complete information of how to handle, transport and store the "Optical Fiber Cable Drums". Handling of various reels/drums is not important only in manufacturing facility it is important at the time of. It is possible to store simplex and duplex type cables and coils with cables up to 4 mm in diameter by laying them on the head.
