

How to set up a fiber optic user router

Summary of Content

To set up a router for fiber optic internet, connect the fiber line to an ONT, link the ONT to your router via Ethernet, and configure your router settings for optimal performance.

Step 1: Gather Required Equipment

- Optical Network Terminal (ONT): Provided by your ISP, converts fiber optic signals into electrical signals your router can use .
- Fiber optic cable: Typically single-mode with SC/APC or SC/UPC connectors .
- Router: Ensure it supports gigabit speeds or higher; some fiber setups may require SFP or WAN ports labeled for fiber .
- Ethernet cable: Cat6a or higher recommended to maintain high-speed performance between the ONT and router .

Step 2: Install the ONT

- Locate the fiber optic wall outlet where the ISP's fiber line enters your home.
- Connect the fiber optic cable to the ONT's input port, handling the connector carefully to avoid dirt or damage .
- Power on the ONT and wait for the status lights to stabilize (usually 2-5 minutes), .

Step 3: Connect the ONT to Your Router

- Use an Ethernet cable to connect the ONT's LAN/Ethernet port to the router's WAN/Internet port .
