

Huijue switch optical port to electrical port

Summary of Content

Huijue switches with hybrid ports can be converted from optical to electrical by using compatible SFP/SFP+ modules and proper cabling, along with configuration adjustments if required.

Understanding Hybrid Ports

Many enterprise switches, including Huijue models, support hybrid ports that can operate either as optical (fiber) or electrical (copper) interfaces. The port type is determined by the transceiver module installed:

- Optical port: Requires an SFP/SFP+ fiber module and fiber optic cabling (single-mode or multi-mode) .
- Electrical port: Requires an SFP/SFP+ copper module (often called a 1000BASE-T or 10GBASE-T module) and standard Ethernet twisted-pair cabling (Cat5e/Cat6/Cat6a) .

Steps to Switch from Optical to Electrical

- Check Port Compatibility: Verify that the Huijue switch port supports both optical and electrical SFP modules. Not all optical-only ports can accept copper modules.
- Obtain a Compatible Copper SFP Module: Use a module that matches the port speed (1G or 10G) and is supported by the switch. Using an unsupported module may prevent the port from activating.
- Remove the Optical Module: Power down the port if required, then carefully remove the existing optical SFP module.
