

Industrial Data Switch PoE

Overview

These robust switches are designed for industrial use and are fully compliant with IEEE 802.3af, 3at, and 3bt Power over Ethernet (PoE) standards. These standards provide up to 15.4W, 30W, and 40W of power per port, respectively. With this standardization, PoE quickly gained popularity, as it enabled a reduction in infrastructure costs. A PoE switch is an Ethernet switch that transmits electrical power over the same cable that carries data. When other network devices are connected to the switch, it detects which ones are PoE-compatible and automatically enables PoE power transmission to those network endpoints. When PoE switches are used, they elevate your industrial operations with an AI-ready, rugged network that offers peak performance, high resilience, advanced security—and that smoothly integrates IT proficiencies into OT environments. Additionally, Smart PoE. In addition to transmitting network data, a PoE Switch has a built-in Power over Ethernet injector to supply up to 100W Power over Ethernet (PoE) to standards-based 802.3.
