

Industry Segmentation of Telecommunication Tower Companies

Summary of Content

Telecommunication tower companies are segmented by tower type, ownership, installation, fuel type, and geography, reflecting diverse operational models and market strategies.

Segmentation by Tower Type

Telecom towers are classified based on structural design and functionality:

- Lattice Towers: Freestanding, triangular or rectangular steel structures supporting multiple antennas; dominant in revenue share due to stability and flexibility .
- Guyed Towers: Supported by tensioned cables, suitable for tall structures with lower material costs.
- Monopole Towers: Single-pole structures, increasingly used for urban and 5G deployments due to smaller footprint .
- Stealth Towers: Camouflaged or disguised towers designed to blend with surroundings, often in urban or sensitive areas .
- Other Types: Includes tubular, angular, or hybrid designs for specialized applications .

Segmentation by Ownership

Ownership models define operational control and revenue strategies:

- Operator-Owned: Towers owned and operated by mobile network operators (MNOs).
