

Installation Solution for IP65 Hot Passage in Cambodia

Summary of Content

For IP65-rated hot passage areas in Cambodia, use fully sealed, dust- and water-resistant LED luminaires or enclosures with proper thermal management and secure mounting.

Product Selection

For hot passage or outdoor areas, IP65-rated fixtures are essential to protect against dust and water jets. Options include:

- **LED Linear Pixel Lights:** Used in riverside and landscape projects in Cambodia, these lights operate at low voltage (DC24V), consume minimal power, and provide full-color dynamic effects while maintaining IP65 protection against water and dust ingress (JUXUANLED project) .
- **Enclosed LED Luminaires:** Products like the STANDARD LSV series feature impact-resistant polycarbonate lenses, integrated LED drivers, and universal quick-mount plates for easy installation in wet or dusty environments .
- **IP65 Junction Boxes:** Robust ABS or polycarbonate enclosures, such as the Intratec Junction Box (240x190x110 mm), provide weatherproof housing for electrical connections, transformers, or LED drivers .

Installation Considerations

- **Sealing and Gaskets:** Ensure all enclosures and fixtures have properly designed gaskets to prevent water and dust ingress. Cable entry points are critical; use IP-rated cable glands and maintain proper compression .
