

KVM switcher indicator is red

Overview

Solution: First, check if the switch's power indicator light is on and ensure the power source is properly connected. If there's a power switch, make sure it's in the "On" position. If the problem. The lights on the front stay green, even when trying to toggle the device with the physical buttons on the switch and with the keyboard (ctrl ctrl 1-4). Start by turning off all of the connected computers and peripherals, unplugging everything from the KVM, including power, and leaving it for 10 seconds. Then connect everything to the KVM following the procedure in the. This guide provides a structured diagnostic taxonomy separating five distinct KVM failure categories, each with a different root cause, diagnostic path, and prevention strategy. With over 30 years of KVM expertise since 1992, ConnectPRO has seen every one of these failure modes in production. Inspect Power Indicator Lights: Many KVM switches have LED indicators. Common issues include missing video cables, adapter compatibility, and operating system settings.
