

Lc type optical splitter connector

Overview

The Lucent connector, commonly known as the LC connector, is a small form factor type of fiber optic connector used in high-density aerospace applications. Our portfolio includes a connector kit with a 1.25mm. An optical fiber connector is a device used to link optical fibers, facilitating the efficient transmission of light signals. What is a Fiber Connector?

The optical fiber connector is a kind of detachable passive optical component used. LC (Lucent Connector) is the world's dominant duplex optical interface, used across enterprise networks, telecom infrastructure, and especially data centers. Even as 400G/800G parallel-optics and MPO-based high-density solutions grow, LC remains essential for 10G/25G/50G/100G/200G/400G duplex. This article provides a deep dive into these connectors, their differences, polishing styles, applications, and comparisons with other less common connectors such as MT-RJ and MU. According to different basic principle, it can divide into Fused type and PLC type.
