

Low-loss CIF price of lithium battery energy storage cabinets exported from the 10 ASEAN countries

Summary of Content

The estimated low-cost CIF price for lithium battery energy storage cabinets exported from ASEAN countries is approximately \$85–\$95 per kWh for LFP-based stationary storage systems.

Battery Pack and System Costs

Recent data shows that stationary lithium-ion battery packs for energy storage have dropped to \$70/kWh in 2025, representing the steepest decline among all battery segments due to overcapacity, competition, and adoption of lithium iron phosphate (LFP) chemistry (BloombergNEF). Average LFP pack prices across all segments are around \$81/kWh, while nickel manganese cobalt (NMC) packs are higher at \$128/kWh. For large-scale utility BESS projects, the core equipment cost, including cells integrated into enclosures (5–6 MWh per 20-foot container), is about \$75/kWh, with PCS and EMS adding roughly 10%. Smaller projects may see slightly higher costs due to less favorable economies of scale.

CIF Price Estimation for ASEAN Exports

To estimate CIF prices for ASEAN exports:

- Base battery pack cost: \$70–\$81/kWh for LFP stationary storage.
- Containerized system integration: Adds 10–15% for enclosures, PCS, and EMS.
